

ACTi IP Utility Release Notes

Product: IP Utility
Version: v4.1.06
Release Date: 2012.01.05

IP Utility is a free, Windows-based application tool with friendly user interface. The new version v4.1 helps you locate available ACTi devices in the network by showing its IP address so as the capability of editing essential camera settings such as automatically assign IP address, resolution change and motion detection region setups and more.

New Feature

- 1 Smart firmware upgrade**
It supports one-step firmware upgrade for multiple devices. It can automatically detect the latest firmware that is available in selected folder and its subfolders.
- 2 Global configuring method**
To achieve mass installation and configuration, “Global setting” delivers a new concept of multi-device setup in a speedy fashion. You can configure the settings — Date/Time, Motion, Video, Audio and input URL command with “Global configuring method”. Regardless of unique settings in different models, “Global setting” will automatically select the best and/or next immediate value individually for your selected devices to achieve the best and fastest way for your time-saving installation.
- 3 Auto assign static IP addresses by giving a starting address.**
- 4 Multiple Language support – Czech, Dutch, English, French, Italian, Japanese, Romanian, Simplified Chinese, Spanish and Traditional Chinese.**
The default language is English, IP Utility v4.1 will auto-select the UI languages based on your operation system.
- 5 URL command support**
This version supports URL Command for specific controls and configurations. You can setup multiple devices simultaneously by inputting corresponding URL command and send to selected devices.

Remark

1. Support 32 and 64 bits windows system (Windows 7, XP and Vista).
2. Smart firmware upgrade function will check the firmware filename in local computer. Please do not change firmware file name when you download from ACTi website.
3. If you change devices' IP addresses, please click "Refresh" button to get the current devices' IP addresses.
4. Not support ACD-3100 Video Decoder.
5. Not support channel module firmware upgrade for SED video encoders.
6. CAM models FW upgrade from V2.08.11 to V2.09.11, the upgrading is success but there is an error Message "Upgrade Fail" on Status of IP Utility.
7. Audio function of CAM series cameras are configurable via IP Utility only on firmware version 2.10 or newer. Or user can configure the Audio function on camera's web configurator directly.
8. IP Utility will detect incorrect firmware upgrade procedure automatically.
