

**WRT54G3G-EM**  
**Wireless-G Router for 3G/UMTS Broadband**  
Release Notes  
Firmware Version 2.01.03

**I. FILE DETAILS**

File Name	WRT54G3G-EM_2.01.03-EM_ETSI_code.bin
Firmware Version	2.01.03
Previous Firmware Version	2.01.00
Firmware Release Date	January 25, 2008

**II. NEW FEATURES AND IMPROVEMENT**

1. New Data Card support. WRT54G3G-EM now supports the following new data cards:
  - a. Option GlobeTrotter Fusion+
  - b. Huawei E800
2. An aborted login will redirect to Status page. If the user cancels the GUI login sequence using the Escape key, he/she will be redirected to a read-only Status page showing the connection status of the data card. Previously, the user would be redirected to a "401 Unauthorized" page.
3. An invalid login will redirect to Status page. If the user attempts to login into the GUI using an incorrect username and/or password 3 times in a row, he/she will be redirected to a read-only Status page showing the connection status of the data card. Previously, the user would be redirected to a "401 Unauthorized" page.

**III. FIXED ISSUES**

1. 3G connection terminates with PPPoE WAN connection. When the WAN connection was active and set to PPPoE, the 3G (mobile) connection prematurely terminated if it was initiated. This issue has been fixed in this firmware release.
2. Reboot during FTP transfer. The router would reboot when a user on the WAN-side was downloading a file, over the 3G (mobile) connection, from an

FTP server located on the LAN-side. This issue has been fixed in this firmware release.

#### **IV. KNOWN ISSUES**

At the time of release, there are no known issues with the WRT54G3G-EM Wireless-G Router for 3G/UMTS Broadband.
